

magnetic[®] Measuring Computer

Description:

Battery-powered measuring computer for reliable safe filling of heating systems and for monitoring of single-use cartridges. It measures the flow rate in l/min., the total filling quantity in litres and the electrical conductivity in $\mu\text{s}/\text{cm}$. Selectable limit values for the maximum still tolerated mineral content in the deionized water (at device outlet). Resettable limit value and counter value. Backlit display. Visual and audio limit alarm if limit is exceeded.

Technical Data: magnetic[®] Measuring Computer

- ⇒ Electrical conductivity measurement in $\mu\text{s}/\text{cm}$
- ⇒ Measurement of the flow rate in l/min
- ⇒ Measurement of the total filling quantity
- ⇒ Backlit display
- ⇒ Visual and audio monitoring of the set conductivity value limit
- ⇒ Resettable digital water quantity counter
- ⇒ Coupling size: DN 25 outer thread (w/o coupling adaptor)
- ⇒ Coupling adaptor optional (adaptor for 3/4" inner thread and 1/2" hose nozzle)
